```java
class Coins {
 public static void main(String[] args) {
// user inserting amount of conis
int coins = Integer.parseInt(args[0]);

// defining tow ints quarters and cents and seting them to 0
int quarters = 0;
int cents = 0;

//defining quarters as coins/25
//defining cents as coins%25
quarters = coins/25;
cents = coins%25;

// printing Use + quarters and + cents
 System.out.println( "Use " + quarters + " quarters and " + cents + " cents");
}
}
```
